INSPIRING YOU TO
PROTECT GREAT PLACES

TETON REGIONAL LAND TRUST
SUMMER 2024

Cover Photo
by Howie Garber

A Message from our Executive Director

“How’s Kim today?” This was the predictable, understated, third-person greeting I received every time Clen Atchley and I met. Clen served as a board member and board president at Teton Regional Land Trust soon after Fremont Heritage Trust merged with Teton Valley Land Trust. He and his wife Emma welcomed me to their home on my first day as an intern at the Land Trust more than 25 years ago. Clen schooled me on what questions I could and couldn’t ask farmers and ranchers, the business aspects of farming, and, kindly, how I’d need to be much more patient in my conversations with his peers. A seed potato farmer in Fremont County, Clen was a champion for farmland preservation who donated easements, talked with landowners, and traveled to Washington, D.C. to advocate for easement funding for agricultural lands.

In a recent conversation, Clen expressed how far the Land Trust has come since the early days, but he also understood the additional challenges we face today. Clen passed away this spring, and his memory will always serve as a personal inspiration and source of wisdom as we envision the future of the Land Trust.

This year, we are invigorated to implement a strategic plan inspired by you. As part of the planning process, our members, landowners, and partners shared that they:

- Value our work as an integral part of our eastern Idaho landscapes, community, and economy.
- Prioritize protecting wildlife corridors, working lands, wetlands, and waterways.
- Understand the importance and challenge of stewarding private lands now and forever.

We are committed to accelerating our efforts to conserve critical lands while addressing stewardship needs, diversifying our partnerships to ensure the best conservation outcomes, and building our internal capacity to continue and sustain the professional work of the Land Trust. Our plan empowers our board, staff, volunteers, and community partners to work collaboratively toward a shared vision that will benefit our communities—forever.

Your support is already helping us achieve some of these goals. So far in 2024, the Land Trust has partnered with farmers and ranchers, foundations, and public agencies to help protect more than 2,300 acres of wildlife corridors, upland bird habitat, and working farms and ranches. And the unsung heroes of the Land Trust staff, members of our stewardship team, continue to ensure the 42,000 acres of already-conserved private land in eastern Idaho provide clean water, critical habitat for wildlife, climate resilience, and recreational access that benefits all eastern Idaho’s residents.

This summer, we hope you’ll enjoy one of the properties or trails that the Land Trust has helped conserve. One of our favorites is the Teton Creek Corridor trail. Through the Teton Creek Collaborative, the Land Trust and our partners are excited about the placement and dedication of the Joselin Matkins Memorial Bridge, which will connect Driggs to the rest of the Teton Creek Corridor trail. Joselin will always be a hero to us at the Land Trust, and the corridor protection and community collaboration is part of her legacy.

Clen was right. The Land Trust has come a long way since our humble beginnings 34 years ago and, in a very Clen-like fashion, we want to know how you are doing and how you want to engage in conservation. We hope that you will let us know by coming to one of our summer events, volunteering with us, stopping by the office, or joining us on a walk. Thank you for your support of the Land Trust, saving open spaces, protecting fish and wildlife habitat, and preserving working lands.

Thank you,

Kim Trotter
Executive Director

Conserving working farms and ranches, fish and wildlife habitat, and scenic open spaces in eastern Idaho for this and future generations.

The South Fork of the Snake

CONSERVATION THROUGH COLLABORATION

By Anna Naylor, Development Associate

The South Fork of the Snake River is recognized as one of the most beautiful and significant wildlife habitats in the region. But beyond its beauty lies a deeper story—a story of collaboration and conservation that has preserved one of the most biodiverse habitats in Idaho. During time spent on the South Fork, we have the opportunity to witness the evidence of an almost thirty-year effort to protect this unique treasure of eastern Idaho.

The Upper Snake River Land Conservation Partnership was formed in 1991 in response to the imminent threats of development in the area, consisting of the Bureau of Land Management, Idaho Department of Fish and Game, and three nonprofit organizations: The Conservation Fund, The Nature Conservancy, and Teton Regional Land Trust. The partnership was formed to ensure that the beauty of the area remains preserved and benefits anyone who has fished or floated these waters. Through these collaborative efforts, more than 16,000 acres of vital habitat along the South Fork of the Snake River and lower Henry's Fork have been protected through conservation easements.

Conservation easements aren't just about protecting land in perpetuity; they're about keeping habitats connected. By safeguarding these areas, we ensure the continuity of wildlife corridors—essential pathways for species to move and thrive. Along the South Fork, these easements on private land help maintain crucial links between habitats, supporting the diversity of wildlife that call this region home.

The South Fork is not just a beautiful river, but a place abundant with life. It is the most productive bald eagle nesting habitat in the Greater Yellowstone Ecosystem; its cottonwood canopy forest, including upland and wetland habitat, is one of the most unique and biodiverse ecosystems in Idaho, supporting 126 bird species; and, outside of Yellowstone National Park, it hosts the largest populations of Yellowstone cutthroat trout in the nation.

The South Fork of the Snake River stands as a testament to the power of collaboration and conservation. Its pristine waters and abundant wildlife corridors are a reminder of what's possible when we work together to protect these places. As we continue to navigate the delicate balance between human activity and environmental preservation, the organizations, public entities, and private landowners that collaborate to protect these places are more important than ever, to ensure a positive impact on our region's ecosystems. Teton Regional Land Trust continues to work with landowners today to protect more lands within the South Fork of the Snake River and the confluence of the Henry's Fork and South Fork. It's up to us to prioritize conservation efforts and leave a lasting legacy of stewardship for future generations.

More than 300,000 anglers, campers, hikers, boaters, and other recreationalists use the South Fork of the Snake River each year.

Soil Health Resources

STEWARDSHIP DEPARTMENT RECEIVES GRANT FROM AMERICAN FARMLAND TRUST

By Kristy Smith, Stewardship Associate

In the spring of 2023, Teton Regional Land Trust's Stewardship Department received a grant through American Farmland Trust's Soil Health Stewards Grant Program to increase adoption of soil health practices on permanently protected agricultural land in our service area. The Land Trust staff attended a weeklong online training in April last year to learn the basics and benefits of soil health, how it is practiced, challenges to adoption, and how to connect agricultural producers and landowners with soil health resources.

So what does "soil health practices" even mean? At its core, soil health is the continued capacity of the soil to function as a vital living ecosystem that sustains plants, animals, and humans. In order to produce nutritious forage for livestock, commercially valuable crops, and grow food to eat, the soil for these plants must be healthy enough to provide water, nutrients, and air. Additionally, different plants require different soil inputs. For example, rye is winter-hardy and can survive in nutrient-poor soils, but corn has a comparatively low tolerance for cold and requires higher organic matter content in order to survive. Even across the different counties within our service area, there are differences in soil types, climate, elevation, hard frost period, and annual precipitation that all play into farmers and producers' ability to grow crops.

Simply put, healthy soils tend to produce more nutrient-dense crops and overall healthier plants. Farmers and producers want the soil on their land to produce high quality food and other commodities; capture, filter, and store water; cycle and recycle nutrients; be drought-resilient; protect plants from stress and pathogens; store carbon; provide stability; and provide habitat for soil biodiversity. In order to achieve this, one must first understand and address all four soil health management principles.

4 Soil Health Principles

Disturbance to the soil surface can be minimized through the implementation of no-till or minimal till practices, leaving harvest residue in place, and prescribed grazing. When the soil

surface is disturbed, carbon that could otherwise be supplied to plant roots is released into the atmosphere, along with vital soil moisture. The soil surface similarly benefits from cover, again in the form of leaving crop residue following harvest or from planting cover crop. This ensures that precipitation slows down as it moves from the soil surface downward through the soil profile, increasing water availability to plants and soil organisms.

Soil biodiversity can be improved by planting diverse cover crops—particularly legumes—diversifying crop species within the same agricultural fields, and integrating livestock. Different cover crops supplement the soil with varying minerals and nutrients that are vital to soil health and successful crop production. Lastly, living roots can be maintained by sowing cover crops during the off-season or interplanting during the growing season, avoiding bare ground, managing crop rotations for prolonged cover to maximize nutrient input and minimize disturbance, and increasing the amount of time spent in perennial crops.

The wonderful thing about soil health is that it can be tailored to each producer's needs and budget. For instance, a large-scale grain operation may set aside an acre or two to experiment with different cover crops, or they may apply a large-scale plan to improve soil health, starting with minor alterations and amendments to current operations in order to better understand how the crops will respond to these changes. Case studies regarding soil health practices used in similar climates to eastern Idaho were published by American Farmland Trust (AFT) and can be accessed through the Teton Region-

al Land Trust website. These case studies provide examples of practices that worked, as well as some that did not, and funding and cost-share opportunities used by producers and farmers.

As part of the grant obligation for the AFT's Soil Health Stewards Program, the Land Trust's Stewardship Department has developed an action plan to strategize how our organization can better promote soil health practices on both protected land and land that we may play a part in protecting in the future. We created organizational touchpoints where engagement and outreach around soil health practices are possible, such as staff and board training, landowner communications and networking opportunities, and built off these to define proposed actions and describe tasks to be completed for that action. The Stewardship Department also tracked how many landowners and farmers we engaged in soil health discussions over the 2023 monitoring season. Going forward, we plan to use this data to inform where more information and support is needed by the agricultural community and to help identify how the Land Trust can meet those needs. This work is also done in partnership with Natural Resources Conservation Service, Friends of the Teton River, and Henry's Fork Foundation.

By applying soil health practices on agricultural ground, producers can increase plant biodiversity, provide forage and habitat for pollinators and other small animals, improve water infiltration, increase the longevity of the soil they work with, and, of course, produce healthier, more nutritious crops. These actions contribute to overall watershed vitality and foster healthy ecosystem functions on a local scale. We are, after all, a part of the ecosystem we live in, and by taking steps to improve soil health, we as a community can have lasting positive effects on the landscape for the benefit of future generations.

If you or someone you know are interested in learning more about soil health practices in eastern Idaho, please contact Teton Regional Land Trust at (208) 354-8939. We would be happy to connect you with funding and informational resources. We look forward to fostering these new and exciting connections between producers, agricultural agencies, and organizations for the purpose of improving soil health.

Art & Access Along the Teton Creek Pathway

NEW IMPROVEMENTS TO SEE AND EXPERIENCE THIS SUMMER

By Renee Hiebert, Conservation Project Manager

With financial support from the LOR Foundation, the Teton Creek Collaborative commissioned artist Derek No-Sun Brown to create sculptures for the Teton Creek Pathway. This past winter, the sculptures were on display at the Teton Geo Center in downtown Driggs. We are honored to have three of No-Sun's sculptures (an elk, a trout, and a bear) find their homes along the Teton Creek Pathway this spring.

Derek No-Sun Brown's elk sculpture in the Teton Geo Center

No-Sun is a New Mexico-based artist honored to be carrying on ancestry from the Shoshone-Bannock, Klamath, and Anishinabe People. He was raised on the Fort Hall Reservation near Blackfoot, Idaho, and on the Boise Forte Reservation in Minnesota. He earned his BFA degree from the Institute of American Indian Arts in Santa Fe, New Mexico, and started his own business, War Medicine Empire.

No-Sun is a New Mexico-based artist honored to be carrying on ancestry from the Shoshone-Bannock, Klamath, and Anishinabe People. He was raised on the Fort Hall Reservation near Blackfoot, Idaho, and on the Boise Forte Reservation in Minnesota. He earned his BFA degree from the Institute of American Indian Arts in Santa Fe, New Mexico, and started his own business, War Medicine Empire.

In addition to new artwork, a new pedestrian bridge spans Teton Creek for trail users to cross the creek safely alongside

Cemetery Road in Driggs. The bridge has been in the works for several years by the Teton Creek Corridor Project Partners and the City of Driggs, largely inspired by Teton Regional Land Trust's former Executive Director, Joselin Matkins. Joselin believed deeply in the power of connecting communities to nature and was excited about the Teton Creek trail and a pedestrian bridge over Teton Creek. Joselin's contributions to the Teton Creek Corridor collaborative helped ensure that this area of Teton Creek remained open for wildlife and for people. With profound honor, we will dedicate the bridge in memory of the late Joselin Matkins. The Teton Creek Corridor Project Partners, Teton Regional Land Trust, Teton Valley Trails and Pathways, Friends of the Teton River, and Valley Advocates for Responsible Development, along with several private donors, the Legacy Works Group, and the Joselin Matkins Enduring Spirit Fund helped to make this project happen.

THE LAND TRUST REMEMBERS CLEN ATCHLEY An Agricultural Conservation Pioneer

Clen Atchley (1944–2024) and his wife Emma have been instrumental to the long-term success of Teton Regional Land Trust. In addition to being board members, Clen and Emma donated two easements in Fremont County. Clen joined the Land

Trust Board when the Fremont Heritage Land Trust and Teton Valley Land Trust merged to create Teton Regional Land Trust in 1997, and later served as board president. He also brought other farmers to the organization including current Board Member and former Board President, John Nedrow. "I have Clen to thank for introducing me to the Land Trust and starting me on the road to believing in the value of conservation," John said.

Clen and Emma are well respected seed potato farmers who have been recognized nationally for their successful busi-

ness, Flying A Ranch. He loved farming and was a long-term thinker, whose keen intellect prompted him to be both innovative and practical in integrating new ideas into farming practices. Clen enjoyed the challenge of growing potatoes and enjoyed working with the many other families and people he met while doing business. For him, it was the honest relationships and friendships that were just as important as the crop.

Clen loved the landscape of the Ashton area and nothing delighted him more than watching the sunrises and sunsets on the mountains. He was always looking for ways to contribute to the wellbeing of the Ashton area and his neighbors, assisting with planting or harvesting in difficult weather, providing numerous scholarships for local students, donating to numerous projects, and enjoying friendships. Clen Atchley was truly an inspiration to us all for his love of this iconic landscape and for his commitment to agricultural conservation.

Farm Succession

PLANNING FOR THE FUTURE OF AGRICULTURAL LANDS

By Josh Holmes, Conservation Project Manager

Bowles Darby Creek Succession Farm

We are pleased to announce our participation in the American Farmland Trust's Land Transfer Navigator program. In the fall of 2023, Teton Regional Land Trust received a four-year grant from American Farmland Trust (AFT) to support our involvement in the program. Land Transfer Navigators is a national program developed by AFT, with support from United States Department of Agriculture's Natural Resources Conservation Service, to dramatically increase the transfer of farm and ranch land to a new generation of producers. The program catalyzes practitioners from across the country to support equitable farm and ranch transfers that work for both entering and exiting generations.

Through a four-year program, AFT will provide training along with technical and financial assistance to support land trusts to serve as "Land Transfer Navigators," while building an online resource hub and FarmLink Finder to support farmers and ranchers across the nation.

In 2024, we will begin to develop materials and information about succession planning to share with landowners. Thankfully, the Land Trust is not expected to reinvent the wheel. Right now, landowners can take advantage of the resources made available by the Idaho State Department of Agriculture. As the Land Trust continues its efforts to conserve farmland with conservation easements, we are also looking at other ways to address the loss of farm and ranch lands in our service area. According to statistics shared by AFT, at least one-third of agricultural lands in the U.S. will be transferred within the next 20 years. This transfer of land is directly related to the rising average age of farmers and ranchers. As they retire and land ownership changes, the land the farmer previously stewarded is vulnerable to conversion away from agricultural uses. The rural communities in our service area depend on the viability of agricultural lands. Our participation in this program is part of our continued commitment to serve the landowners and communities within our service area.

In the Greater Yellowstone Region, the changes we have seen on our landscape are very real and very concerning. Farmers are feeling more and more pressure to sell their land to development. Low density housing developments are replacing viable agricultural land. The Land Trust acknowledges the strain and stress our communities are facing during this time of monumental change. As we look ahead, we see that our farming families find themselves in a sensitive moment of uncertainty about the future of their livelihood. We are hopeful that by participating in the Land Transfer Navigators program, we will be able to help our farming families navigate some of the difficult decisions they face when planning ahead. Succession planning is an integral part of the effort to keep our working lands working. By planning ahead for the future of the family's farm, they can feel secure that the agricultural heritage will continue on to the next generation of producers.

Little Pine Creek Succession Farm

If you are interested in learning more about farm succession, we encourage you to visit the Idaho Farm and Ranch Center at agri.idaho.gov/farmcenter to download a Farm and Ranch Transition Packet, take one of the online courses offered on that website, or contact Josh at josh@tetonlandtrust.org.

Welcome New Staff and Board Members

ANNA NAYLOR, Development Associate

Anna was born and raised in Teton Valley, Idaho, where she grew up fly fishing, picking berries, camping, and hiking. She graduated with a BA in English with an emphasis in professional writing from the University of Idaho and an MA in Technical Communication from Boise

State University. Inspired by the remarkable landscapes of Teton Valley and the impactful work of the Teton Regional Land Trust, Anna is excited to contribute her passion and experience to further the organization's mission.

Q: How would you describe your family?

A: My family is vibrant and hilarious. My adventures with them as a kid, and even now as an adult, are the reason I am so passionate about protecting these vital spaces.

NIAH PENNINGTON, Stewardship Associate

Niah grew up in Helena, Montana, and her passion for wildlife began at an early age. She graduated in 2014 with a bachelor's degree in Wildlife Biology from the University of Montana. Niah worked as a wildlife technician for the U.S. Forest Service on the Helena-Lewis

and Clark National Forest and later on the Bridger-Teton in Jackson, Wyoming. She expects to graduate in December 2024 with a master's degree in Fish, Wildlife, and Conservation Biology from Colorado State University.

Q: What do you wish you had more time for?

A: I always wish for more time backpacking in the warmer months. I also wish for more time reading at home, with my cats to warm my lap, especially on gray days.

DAVID PEASE, Board Member

Dr. Pease works as an emergency department physician in Salt Lake City, Utah, where he has been a partner in the same group for almost 30 years. David's greatest passion is for the natural world. He spends much of his free time outdoors, trail running and climbing in the spring, summer, and fall, and backcountry and Nordic skiing in the winter. David loves the phrase "think globally, act locally" and feels that serving on the Land Trust board is a great way to "act locally."

Q: What's your favorite meal?

A: I enjoy a really good seafood paella. For me, it's something I prepare for special occasions. I always serve it with homemade sourdough bread. It brings back great memories of unique places we have traveled to.

SARAH ASHWORTH, Board Member

Land conservation is near and dear to Sarah. She sees being on the board as an opportunity to make a positive and constructive contribution in support of the Land Trust's mission "to conserve working farms and ranches, fish and wildlife habitat, and scenic open spaces in eastern Idaho for this and future generations." Sarah has served as active board chair of the Big Hole River Foundation in southwest Montana. She likes that the area the Land Trust serves to conserve is focused, which hopefully makes educational opportunities a little easier with farmers, ranchers, and other landowners in the area.

Q: What's your favorite plant?

A: For me, there is nothing like the fresh, spicy smell of sagebrush especially in early winter... and I love its pale green shade. Earth tones of the natural habitats surrounding us are truly divine!

MIKE MERIGLIANO, Board Member

Mike is an experienced plant ecologist, whose work includes natural resource management and research in plant ecology, specifically the connection between the physical environment, disturbance, and animals. He believes the Land Trust's role in private land protection is especially important because such lands are typically very productive and yet often degraded, making long term stewardship of existing easements difficult logistically but also so important.

Q: What's your favorite place in your home?

A: Wherever my wife Linda is.

RON MILLER, Board Member

Though Ron’s conservation roots lie in growing up on a small river in central Nebraska, his link to this area lies in a long, and enjoyable relationship with the Land Trust and its staff, as he currently has a conservation easement on his property. He has worked with the Land Trust for a long time and recognizes the extensive value of the work the organization has done and continues to do in land conservation. As a retired physician specializing in Neuroradiology, Dr. Miller enjoyed all facets of his occupation, but has always been interested in our natural environment, especially the interactions of water and land.

Q: What inspires you?

A: Hard-working individuals protecting the environment for our children and people that have devoted their lives to helping others.

JEFF CARR, Board Member

Jeff has been the Executive Director of the Museum of Idaho since January 2023, and on the museum staff since 2017. As an eastern Idaho native, he is highly involved in the Idaho Falls community, including serving on several other boards. In addition to the museum, Jeff also has a background in journalism, academia, and foreign affairs, having worked for the Central Intelligence Agency as a Political and Leadership Analyst and for Stanford University as a Program and Publication Coordinator. Jeff is a veteran communicator and storyteller who knows the Idaho Falls cultural, nonprofit, philanthropic, and business communities well.

Q: What’s your favorite river?

A: The Snake River is my river. I love walking and biking along it here in Idaho Falls and the connection I feel with people from all backgrounds who take their time to walk it as well.

**7TH ANNUAL
GREATER YELLOWSTONE
CRANE FESTIVAL**

September 18-21
TETON VALLEY, IDAHO
Come stay overnight in Teton Valley!

Enjoy crane tours, workshops,
and Saturday Community
Celebration. For more information

IN A LANDSCAPE: Classical Music in the Wild™ will be coming to Teton Valley on Wednesday, July 24, from 4:30-8:30pm, on the beautifully conserved and restored 118-acre Teton River Headwaters property in Victor. The Land Trust is excited to be bringing this unique concert experience, with all new music from classical pianist, Hunter Noack, back again this year.

IN A LANDSCAPE is an outdoor concert series where America's most stunning landscapes replace the traditional concert hall. "The strength of our organization is in our partnerships," Hunter said. "We work with state and national parks, land trusts, and other conservation groups, as well as businesses. By getting people into different landscapes, they can witness how landscape work is getting done, not just conserving land but using the land responsibly. Most of us are disconnected from natural landscapes; my hope is to connect people back to the natural world."

Teton River Headwaters, owned by Tim and Margot Watters, is home to multiple creeks and springs that come together to form the headwaters of the Teton River right past the property line, making it an ecologically important area for the health of the Teton River system and the wildlife, fish, and birds that rely on it. The Watters purchased the property in 2001 after spending time in Teton Valley fishing and recreating for years. "The property was sitting there forever on the market. We put in an offer, but another offer came in and was accepted right before ours. They wanted to develop it," Tim said.

Tim and Margot offered to buy them out but they wanted significantly more than what they had just contracted for, so they went to the Land Trust for help. "It was Mike Whitfield who was able to fig-

ure out funding to bridge the gap between what we could offer and what they wanted. Since it was under contract to be developed but we did not want to develop, the Land Trust helped with finding a solution," explained Tim. That solution was a conservation easement.

Since putting the conservation easement on their land, the Watters have improved the wetland community by creating an open water feature for waterfowl and fencing to keep livestock out of the riparian areas. They have seen an increase in use of the wetlands by birds and other wildlife. Tim stated: "I really appreciate stewarding the land not only for our own enjoyment, but also for keeping it as ecologically productive as possible."

Hunter Noack and the IN A LANDSCAPE crew first came to Teton Valley in 2021 at the invitation of the late Nancy Huntsman, whose family owns and stewards Fox Creek Ranch, where the first IN A LANDSCAPE concert was held.

"I am excited to return this summer to celebrate yet another landscape in this valley that has inspired artists for millennia, from the traditional poetry and songs of Shoshone-Bannock people to the paintings of Thomas Moran, which inspired congress to create America's first National Park," Hunter said.

We hope you secured your tickets to IN A LANDSCAPE and will be joining us on July 24 to enjoy the concert, conservation tour of the Teton River Headwaters property before the show, and silent auction and bucket raffle to support our conservation work in eastern Idaho, while having the opportunity to catch up with fellow Land Trust members.

A Message from our Board President

As I begin my term as President of the Board of Directors of Teton Regional Land Trust, I want to thank our Land Trust members for their support of our mission—to conserve working farms and ranches, fish and wildlife habitat, and scenic open spaces in eastern Idaho for this and future generations. The Land Trust would not be here today without your generous contributions for the last 34 years. Your continuous and unwavering support remains the life blood of our organization.

I also want to acknowledge those who preceded me as president, particularly for the last three years. Arantza Zabala, who served as board president for the last two years, and John Nedrow, who served as board president before her, saw the Land Trust through the most tumultuous period of uncertainty. Under their leadership—with the hard work of the staff leadership, and your support—the Land Trust has come out stronger and even more resolute to protect eastern Idaho's most precious private lands.

Since Kim Trotter joined us as executive director in September 2022, we completed our Legacy of Land capital campaign, celebrated our 100th conservation project in Teton County, completed a strategic and business plan, improved benefits for the staff, and increased board effectiveness. In a short time, we have moved from uncertainty to a clear and promising future.

We have a strong, active board; a talented, dedicated staff; and the steadfast support of our Land Trust members, which puts us in the right place at the right time to pursue our mission and vision. I look forward to the challenge and hope you join me in safeguarding this unique and irreplaceable landscape.

Thank you,

Bill Rogers

Bill Rogers
Board President

TETON REGIONAL LAND TRUST
1520 SOUTH 500 WEST
PO BOX 247
DRIGGS, ID 83422

PLEASE REMEMBER US IN YOUR TIN CUP GIVING THIS YEAR.
To give, go to tincupchallenge.org between June 14 and July 26 and select Teton Regional Land Trust as your donation recipient.

Your support through Tin Cup will ensure we can continue to protect the most vulnerable and irreplaceable habitats in Teton Valley. Last year, we proudly celebrated our 100th conservation project in Teton County, located at Darby Creek Farm. Thanks to you, we are able to work with passionate landowners to conserve the lands that the people and wildlife need in order to thrive.

Since 1990, you have helped conserve nearly 13,000 acres in Teton County, of which 29 miles is along the Teton River. Thank you for making such a profound impact on this landscape not only today but for generations to come!
